

Standard ERP

One application for all your business processes

Standard ERP is an enterprise resource planning system designed to manage businesses of all sizes in almost any industry. Account management, order processing, inventory, manufacturing and job costing are among the core components, but Standard ERP goes beyond conventional functionality.

Superior Cloud Technology

Host in our cloud environment, your own on-premise server, or use a hybrid of the two.

Quick Setup

Get your system up and running faster, at a lower cost, with fewer implementation consultants required.

Multi-Platform & Mobility

Windows, macOS, Linux, Android and iOS.

Integrated Ecosystem

From tax reporting and processing digital transactions to online distribution, e-invoicing and more.

Industry-Specific

Choose from a wide range of verticals and tailor the system for your market and business needs.

Global Access

Available in over 30 languages with installations in over 110 countries.

Business Intelligence

Analyze your data graphically.

Discover the right software for your business

The engine of Standard ERP provides the tools to run the essentials of any business.

- Accounts Receivable
- Accounts Payable
- Business Communicator
- Cashbook
- Document Manager
- General Ledger
- Purchase Orders
- Sales Orders
- Workflow Overview

Standard ERP is a modular system offering solutions carefully designed for specific industries using HansaWorld's programming language, meaning every vertical, and the data managed in each, are interconnected. In a single system, users have an overview of data throughout their entire business and its operations.

- Hospitality
- Logistics
- Production
- Rental
- Retail
- Services

Certified HansaWorld Business Partner:

Integrated Ecosystem

Standard ERP offers a unique combination of integrated, third-party services where users eliminate the need for additional software.

Functionality available through integrations include, reporting and calculating taxes, graphical business intelligence, processing credit card transactions, reconciling accounts, e-invoicing, and more.

- Avalara
- CyberSource
- Envestnet | Yodlee
- flex.bi
- Omniva
- SiteMinder
- SugarCRM

Mixed Platform

The server application of Standard ERP runs on macOS, Linux and Windows servers while the client application runs on Linux, macOS, Windows and Chrome OS, as well as mobile devices running iOS, Windows and Android.
